

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

HORTUS PADDINGTONENSIS:

·K

OR,

A CATALOGUE

OF:

PLANTS

CULTIVATED IN THE GARDEN

J. SYMMONS, Esq. Paddington-Boule.

By W. SALISBURY, GARDENER.

I cannot but think the very Complacency, and Satisfaction which a Man takes in these Works of Nature, to be a laudable, if not a virtuous Habit of Mind. ADDISON.

London:

PRINTED BY STEPHEN COUCHMAN, FOR SHEPPERSON AND REYNOLDS, Nº 137, OXFORD-STREET; AND SOLD BY MOST OF THE NURSERY AND SEEDS-MEN, IN AND ABOUT LONDON.

1797.

July 1910 22704 Sa3.3

TO

JOHN SYMMONS, Efq. F. R. S.

SIR,

ANXIOUS to gratify the wishes of feveral persons, occasional visitants of your Garden, illustrious in rank, and eminent in superior talents, who have been pleafed to think, that a Catalogue of the Plants in your extensive collection, would, at the same time

DEDICATION.

time as it displayed your vegetable riches, which your liberality renders accessible to every one, in some degree contribute to diffuse a more general knowledge of Plants; I have prefumed to lay before the Public, the following Catalogue. And if the present work, fhould hereafter excite some person of superior abilities, to undertake a general one, on a fimilar plan, which, I am truly fensible, would be of material service to Botanic Science, my humble endeavours will be amply repaid; as well by deriving the peculiar fatisfaction of not having wholly misemployed my time, as by affording me an opportunity, highly gratifying to my feelings, of tellifying the happiness I have experienced in your fervice, where the opportunities I have enjoyed, have afforded me ample means, of enlarging my finall frock of botanic knowledge.

Accept, Sir, the essusions of a sincere and grateful heart; wishing you health, long to enjoy that complacency and satisfaction, your elegant and scientisic mind must seel, in contemplating the beauties of a vegetable world; formed under your softering hand, and supported by your generous bounty.

With the highest respect,

I am,

SIR.

Your obliged and obedient Servant,

W. SALISBURY.

Paddington-House, S.pt. 25, 1797.
